Communication over Noisy Channels

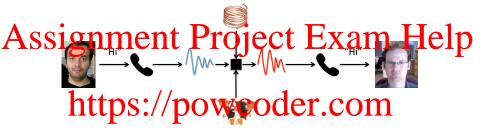

Assignment Projects Exam Help

A noisy channel is a channel that potentially introduces errors in the https://powcoder.com

The Problem of Communication

"The fundamental problem of communication is that of reproducing at one point either earth or portal nate and artes are selected arother point." (Claude Shannon, 1948)

Example: Telephone Network

Source Aditya We Chat powcoder

Channel: Analogue telephone line

Decoder: Telephone handset

Destination: Mark

Key Questions

How do we model noisy communication abstractly?

Assignment Project Exam Help
What are the practical approaches to noise correction?

Communication over Noisy Channels: Big Picture Assignment Project Exam Help

Noisy Channels: Formally

https://powcoder.com

Probability drd row We Chat powcoder

Suppose we have some set $\mathcal{S} = \{1, 2, \dots, S\}$ of possible messages

Assignment Project Exam Help

Sender and receiver agree on what these are

https://powcoder.com

Suppose we have some set $\mathcal{S} = \{1, 2, \dots, S\}$ of possible messages

Assignment Project Exam Help

Sender and receiver agree on what these are

When continuing over the crost mistering messages into some input alphabet &

Suppose we have some set $\mathcal{S} = \{1, 2, \dots, S\}$ of possible messages

Assignment Project Exam Help

Sender and receiver agree on what these are

When contributing even charve the contribution of the messages into some input alphabet &

The receiver then lectives some toossibly corrupted) element from an output alphabet of the control of the cont

- Simple case: $\mathcal{X} = \mathcal{Y} = \{0, 1\}$
- The bit the sender transmits may not be what the receiver sees

Formally, the sender encodes messages via

```
Assignment Project Exam Help
```

https://powcoder.com

Formally, the sender encodes messages via

Assignment Project Exam Help The receiver then decodes messages via

https://powcoder.com

Formally, the sender encodes messages via

Assignment Project Exam Help
The receiver then decodes messages via

https://powcoder.com

Isn't the compressor already "encoding" a message?

 Yes, but we might want to add something for noise tolerance Add WeChat powcoder

Might have $\mathcal{X} \neq \mathcal{Y}$

- e.g. if we allow a special "erased" symbol
- N > 1 can be thought of as multiple uses of a channel
 - e.g. use a bitstring of length 4 to represent messages

Channels: Informally

Assignment Project Exam Help

- ullet accept an **input** from ${\mathcal X}$
- produce an output from y nttps://powcoder.com

Channels: Informally

ssignment Project Exam Help

- accept an input from X
- produce an output from y nttps://powcoder.com

There is a probability of observing various outputs, given an input

- This represents some inherent noise
 Noise course pervior le input powcoder

Channels: Formally

A discrete channel Q consists of:

Assignment Project Exam Help

- an output alphabet $\mathcal{Y} = \{b_1, \dots, b_J\}$
- transattps://ti/powcoder.com

Channels: Formally

A discrete channel Q consists of:

Assignment Project Exam Help

- an output alphabet $\mathcal{Y} = \{b_1, \dots, b_J\}$
- transattps://ti/powcoder.com

The channel Q can be expressed as a matrix

Add W.c.Chat, powcoder

This represents the probability of observing b_j given that we transmit a_i

Channels: Example

Asample Alphannel G with inpute 3 to 1912, [4] youtputs Help

https://powcoder.com
So
$$P(b_1|a_1) = 0.8 = P(b_2|a_3)$$
 and $P(b_1|a_2) = P(b_2|a_2) = 0.5$.

Channels: Example

Example Achannel Gwith in the probabilities expressed by the matrix Help

So $P(b_1|a_1) = 0.8 = P(b_2|a_3)$ and $P(b_1|a_2) = P(b_2|a_2) = 0.5$.

We arrange the injute and the lower the country to long the lows

Actual details of alphabet are abstracted away

What was transmitted over the channel if abba ddcd was received?

 $00001111 \xrightarrow{Q}$ abbaddcd

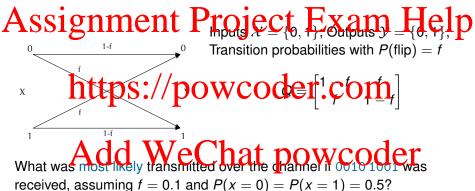

The Binary Symmetric Channel

Each symbol sent across a **binary symmetric channel** has a chance of being "flipped" to its counterpart $(0 \to 1; 1 \to 0)$

The Binary Symmetric Channel

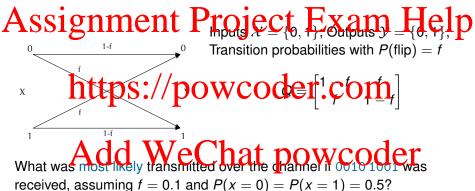

Each symbol sent across a **binary symmetric channel** has a chance of being "flipped" to its counterpart $(0 \to 1; 1 \to 0)$

 \xrightarrow{Q} 0010 1001

The Binary Symmetric Channel

Each symbol sent across a **binary symmetric channel** has a chance of being "flipped" to its counterpart $(0 \to 1; 1 \to 0)$

 $0010\ 1001 \xrightarrow{Q} 0010\ 1001$

Inferring the Input

Assignment Project Fxam Help

Given a particular output $y \in \mathcal{Y}$ received over a channel Q, how likely was it that inparticular output $Y \in \mathcal{Y}$ received over a channel Q, how likely was

Inferring the Input

Assignment Project Exam Help

Given a particular output $y \in \mathcal{Y}$ received over a channel Q, how likely was it that inparticular output $Y \in \mathcal{Y}$ received over a channel Q, how likely was

Inferring the Input: Example

```
Suppose P(x = 0) = P(x = 1) = 0.5. What are the probability that a x = 0 was transmitted over a binary symmetric channel Q with f = 0.1. Assignment Project Exam Help
```

https://powcoder.com

Inferring the Input: Example

```
Suppose P(x = 0) = P(x = 1) = 0.5. What are the probability that a x = 0 was transmitted over a binary symmetric channel Q with f = 0.1

Aissignment P(x = 0|y = 0) = \frac{1}{0.9 \times 0.5} = 0.9

P(x = 0|y = 0) = \frac{1}{0.9 \times 0.5} = 0.9
```

Similarly, https://powcoder.com

Inferring the Input: Example

```
Suppose P(x = 0) = P(x = 1) = 0.5. What are the probability that a x = 0 was transmitted over a binary symmetric channel Q with f = 0.1

Aissignment P(x = 0|y = 0) = \frac{0.9 \times 0.5}{0.9 \times 0.5 + 0.1 \times 0.5} = 0.9
```

Similarly, https://powcoder.com

What if P(x = 0) = 0.01?

Inferring the Input: Example

Suppose P(x = 0) = P(x = 1) = 0.5. What are the probability that a x = 0 was transmitted over a binary symmetric channel Q with f = 0.1Aissignment Project Exam Help $P(x = 0 | y = 0) = \frac{0.9 \times 0.5}{0.9 \times 0.5 + 0.1 \times 0.5} = 0.9$

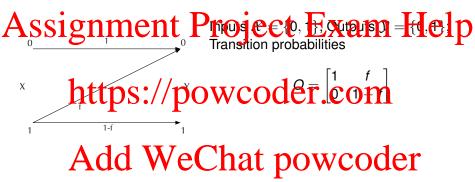

$$P(x=0|y=0) = \frac{0.9 \times 0.5}{0.9 \times 0.5 + 0.1 \times 0.5} = 0.9$$

Similarly, https://powcoder.com

What if P(x = 0) = 0.01?

The Z Channel

Symbols may be corrupted over the channel asymmetrically.

The Z Channel

Symbols may be corrupted over the channel asymmetrically.

https://powcoder.com

Inferring Aedid: We Chat powcoder

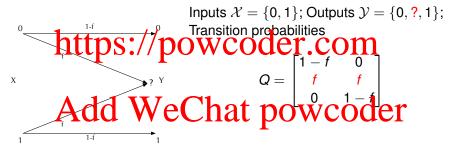

$$P(x=0|y=0) = \frac{P(y=0|x=0)P(x=0)}{\sum_{x'\in\mathcal{X}} P(y=0|x')P(x')} = \frac{P(x=0)}{P(x=0) + f P(x=1)}$$

So $P(x=0|y=0) \rightarrow 1$ as $f \rightarrow 0$, and goes to P(x=0) as $f \rightarrow 1$

The Binary Erasure Channel

We can model a channel which "erases" bits by letting one of the output symbols be the symbol '?' with associated probability f. The receiver
